EXPERIENCE

NetApp North Carolina

Software Engineer III Jul 2023 – Present

- Modernized thousands of lines of monolithic Perl code into a modular Python library, enhancing maintainability and extending longevity of automation tools used in testing workflows and CI/CD pipelines
- Collaborated with project managers and senior engineers to design and implement feature requests for automation tooling, significantly reducing repetitive time-consuming tasks in product development workflows
- Presented an Engineering Tech Talk to over 300 software and QA engineers, demonstrating best automation practices, encouraging adoption of shared technical standards, and fostering cross-team contribution

Software Engineer II Jul 2022 – Jul 2023

- Led an initiative to replace hundreds of insecure legacy commands in favor of a REST API, achieving a 33% reduction in regression test durations and improving product security
- Shipped several first-party company products through cloud automation tooling and collaboration with QA engineers

Software Engineer I Feb 2021 – Jul 2022

- Owned weekly tooling release cycles into production and swiftly resolved regressions in CI/CD pipelines
- Delivered time-sensitive QA requirements efficiently into a complex multi-cloud, multi-configuration tool
- Contributed to team talent growth by conducting interviews and mentoring new hires as a junior engineer

Software Engineer Intern 2020

- Automated a week-long manual regression testing process to under an hour, accelerating product release schedules
- Adapted to a fully virtual internship by maintaining proper time management and communication habits

Lockheed Martin Corporation New Jersey

Software Engineer Intern 2019

- Collaborated with 3 interns to build, test, and deploy a GUI for the Aegis Combat System using enterprise software
- Worked within a Scrum-based Agile team, gaining hands-on exposure to the SDLC and internal CI/CD pipelines

PROJECTS

PolyHeal Hackathon

- Won overall best project and audience favorite at NetApp's first Generative AI Innovation Hackathon out of 30 teams
- Published an internal PyPI package that iteratively fixes script errors through automated validation and stacktrace analysis, resulting in increased developer time savings and code quality

Shokz Device Music Downloader github.com/j4shu/shokz_downloader

- Developed a solution to simplify music download and sequential transmission to a Shokz headphones device
- Utilized the Spotify Web API to asynchronously download files and implemented a flexible CLI with sensible argument parsing to support a variety of use cases

Scuttle github.com/j4shu/scuttle

- Adapted an in-person card game into a 2-player online experience using an open source JavaScript game engine
- Implemented complex game mechanics, state management, lobby system, and deployed application on Heroku

SKILLS

Languages: Python, Perl, Java, C, JavaScript, HTML/CSS, Go, SQL, Swift, Rust
Technologies: Git, Jira, Bitbucket, Jenkins, Cloud Computing (AWS, GCP, Azure), Docker, Vim, Unix/Linux
Other: Agile, Scrum, RESTful API, CI/CD, Confluence, Open Source

EDUCATION

University of Maryland, College Park
B.S. in Computer Science, Minor in Philosophy

EXTRACURRICULAR

Young Women in Technology (WIT) Volunteer

- Led an annual LEGO Mindstorms robotics workshop, mentoring middle school students in STEM concepts, critical thinking, and hands-on problem-solving

Grace Hopper Celebration for Women in Technology (WIT) Volunteer

- Volunteered in Women in Tech recruiting events to support graduate students seeking employment
- Coordinated within an event committee to schedule professional development workshops and manage event budget

University of Maryland Triathlon Team

- Competed in collegiate triathlons and demonstrated strong commitment while balancing academic responsibilities
